DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 11-17, apparatus drawn apparatus to detecting defects in devices with an image display displaying a position mark indicating the tip of the conductor, classified in class 324, subclass 751.
- II. Claims 18 and 19, drawn to a method of detecting defects where in it is determined that there is a continuity between first and second patterns based on luminance signal intensity compared to a threshold, classified in class 250, subclass 307.

The inventions are distinct, each from the other because:

Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as positioning samples within a sample chamber for measurement. See MPEP § 806.05(d).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

A telephone call was made to Gabriela Coman on August 9, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2858

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
